Portfolio: <https://hbdeveloper.vercel.app/>

PROFILE

Advanced Software Development student focused on backend development. Hands-on experience designing and implementing RESTful APIs, layered architecture, SOLID principles, and software engineering best practices. Knowledge of Docker, relational databases, and API testing with Postman. Interested in joining development teams to contribute and continue growing in real-world environments.

EDUCATION

University Technician Degree in Software Application Development (TUDAI)

National University of the Center of the Province of Buenos Aires (UNICEN) – Faculty of Exact Sciences

Status: Final stage of the program

Expected Graduation: November 2026

Pending Requirement: Supervised Professional Internship (PPS)

Relevant Coursework: Programming I & II, Information Technology, Web Development, English I & II

Additional Certification: JavaScript Certificate (Structured Programming and Event-Driven Programming)

TECHNICAL SKILLS

Backend: Java 17, Spring Boot (REST, MVC, Data JPA), REST API Design (HTTP, JSON, Status Codes), Layered Architecture (Controller, Service, Repository), DTOs, Validation, Exception Handling, Security Basics

Persistence: MySQL, JPA, Hibernate

DevOps & Tools: Docker, Docker Compose, Maven, Postman, Git, GitHub

Frontend: React.js, Bootstrap, Tailwind CSS, HTML5, CSS3, JavaScript

Languages: English – Upper Intermediate (B2): Technical Reading, Writing and Conversation

EXPERIENCE & PROJECTS

TuMascotaTandil – Full Stack Web Platform

End-to-end development of a community platform for reporting lost/found pets.

Stack: Java, Spring Boot, JPA, MySQL, React, Vite, Docker, Render, Vercel.

REST API, full CRUD operations, layered architecture, environment variables, production deployment.

Frontend-backend integration and cloud deployment.

ParkingArg – Full Stack Web Application (MERN)

Client-server web application.

Stack: React, Node.js, Express, MongoDB.

REST API design, state management, routing, data persistence, public deployment.

Gym Management Backend – REST API

Modular backend for user and operations management.

Stack: Java, Spring Boot, JPA, MySQL, Docker.

Layered architecture, CRUD endpoints, environment-based configuration.

E-commerce Backend – REST API

Backend for product and commercial operations management.

Stack: Java, Spring Boot, MySQL, Docker.

RESTful design, data persistence, scalable structure.

Rulo Fotografía – Informational Website

Responsive website for service presentation.

Stack: React, Vite, TailwindCSS.

Visual optimization, responsive design, web deployment.

Academic Java Repository

Advanced practice in OOP, data structures, recursion, and design fundamentals.

More projects and demos available on Portfolio and GitHub.
