

HERNÁN BERRINO MALACCORTO

Application Developer | Backend

Buenos Aires, Argentina • berrinohernan@gmail.com • +54 291 470 8124

LinkedIn • GitHub • Portfolio

PROFESSIONAL PROFILE

Application developer focused on backend development, specialized in Java and Spring Boot. Experience building REST APIs, data modeling, and developing solutions aimed at solving real-world problems. Strong foundation in data structures, algorithms, and complexity analysis. Experience integrating external services and Artificial Intelligence models into web applications.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL

Backend: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, JWT, REST APIs, DTOs, validations, exception handling

Fundamentals: Object-oriented programming, data structures (linked lists, trees), algorithms, complexity analysis, control flow

Architecture: Clean Architecture, Layered Architecture, Monolith, Microservices (concepts)

Databases: MySQL, PostgreSQL, JPA, Hibernate

Testing: JUnit, Postman

DevOps: Docker, Docker Compose, Maven, Git, GitHub

Frontend: React, HTML5, CSS3, JavaScript

Languages: English B2

FEATURED PROJECTS

Click to see more projects, demos and code available in my portfolio

AI CV Analysis Assistant – Full Stack 2026–Present

Web application that automates CV evaluation and skill detection using AI

– REST backend in Spring Boot for text processing – Implementation of analysis logic for profile classification – Integration with OpenAI API (GPT-4o) for automated evaluation generation

Contract Reader Assistant – AI Backend 2025–2026

Backend service to simplify contract reading through automated analysis

– REST API in Spring Boot for document processing – Integration with Groq API using LLaMA models for clause extraction and summarization – Design of efficient legal text processing logic

TuMascotaTandil – Full Stack Web Platform 2025–2026

Interactive web application that centralizes lost pets in Tandil, allowing users to publish cases with images, data, and contact information to facilitate recovery

– Backend in Spring Boot with PostgreSQL (Supabase) persistence – Frontend integration in React and deployment using Docker – Admin panel with activity logs for publication management

Parking Management System – Full Stack 2025

Web application for comprehensive parking management with vehicle tracking and automatic fee calculation

– Developed with Node.js, Express, MongoDB, and React – User authentication and configuration panel – Vehicle registration, fee calculation, and ticket printing

EDUCATION

National University of Central Buenos Aires Province (UNICEN) 2025–2026

Associate Degree in Software Application Development (TUDAI)
